DISPENSING SOLUTIONS

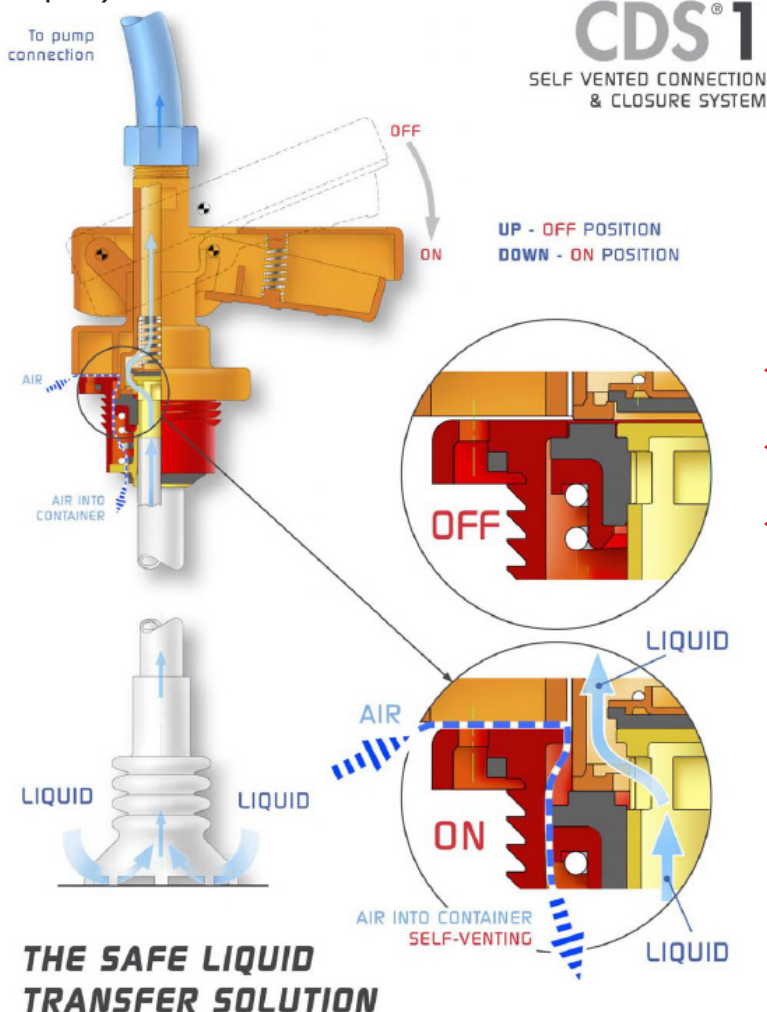

Contact-Free Drum & IBC Dispensing

With changes to the Health & Safety rules we are noticing that businesses are looking for safer and cleaner ways to dispense dangerous chemicals from drums and IBC tanks.

The Tri-Sure Closed Dispensing System (CDS1) is completely closed which eliminates human contact, vapors, unnecessary manual handling and risk of spillage.

These can be fitted to drums and IBCs.

We are letting our customers know that CDS1 is available from our supplier, and if there is enough interest we will stock these (we have some samples).

- ✓ Easy
- ✓ Clean
- ✓ Safe

How CDS1 Works

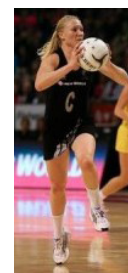

The unit consists of an extractor and a coupler. The extractors come in 2" BSP or 56x4 buttress threads with gaskets and seals of EPDM or Viton and stainless steel springs.

The extractor is inserted into the drum or IBC.

The coupler is connected to a mechanical pump.

To dispense from the container the user clips the coupler onto the extractor and raises the handle to open the line. Liquid is pumped from the container without the need for anyone to touch it, and the entire unit remains sealed from the time the extractor is inserted until the container is empty.
